magnetic digital/analog systems and components

September 5, 1967

Mr. T. Nelson, Systems Consultant
Box 1546
Poughkeepsie, New York 12603

Dear Mr. Nelson:

Thank you very much for the interest you have expressed in the products and capabilities of DI/AN Controls, Inc.

The vast technical knowledge and skills developed at DI/AN Controls over the years encompass basic research, product design and development, manufacturing methods, systems applications, program management, reliability and quality control. This technical knowledge is continually being applied to new proprietary products in the broad field of digital magnetics and high speed printing systems.

To be more specific Mr. Nelson, DI/AN has four major categories of product interest and they are as follows:

1. Core-Transistor Logic and Shift Register Modules and Cards.
2. Memory Systems, including Magnetic Core Stacks for both standard and special purpose applications.
3. Aerospace Systems, Timers, Program Generators, Velocity Counters and the very strong capability to provide a variety of digital aerospace equipment.
4. Digital Printers: High Speed-Half Page, Computer Interfaced and Data Logging Systems.

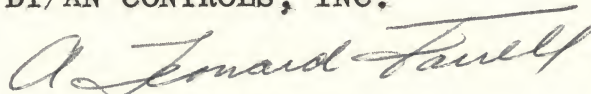

DI/AN CONTROLS, INC.
